

Have a talk to Business Day and The Independent Financial Review

Top Level Report

Here are the things we'd like your opinion on (even if you don't know much about it as even that is of interest!)

n = 3450

Which of these would you like to comment on? (There are about 4 questions in each topic.)

Kiwi Saver and superannuation - what are your retirement plans?		2093 60.67%
Broadband speed, competition, and should the Government do more to speed things up?		2387 69.19%
NZ businesses and the environment - are they truly green?		1487 43.10%
Low cost housing - What is the Government's role?		2003 58.06%

Firstly, have you heard about the new superannuation scheme called Kiwi Saver, that is starting this year?

n = 2081

Yes, I know quite a lot about it		475 22.83%
Yes, but I don't know much about it		1504 72.27%
No		102 4.90%

Which of these statements about Kiwi Saver are correct?

n = 469

Kiwi Saver is voluntary for employees and people can decide whether or not to join up		334 71.22%
Kiwi Saver is compulsory		32 6.82%
New employees will automatically be signed up but can pull out if they want to		406 86.57%
Employers have to contribute towards each Kiwi Saver superannuation fund		65 13.86%
It's optional for employers to contribute		335 71.43%
You can only get the money out when you reach 65		155 33.05%
You can take out your savings to buy a first home		364 77.61%
The Government does not		

contribute anything to Kiwi Saver accounts 

56 11.94%

Having read this summary, how strongly do you agree with these statements?

n = 2023

	<i>Strongly disagree</i>	1	2	3	4	5	6	7	<i>Strongly agree</i>
Kiwi Saver should be compulsory for employees		18.3% (370)	9.8% (198)	11.9% (241)	15.0% (302)	16.1% (325)	13.6% (274)	15.2% (307)	
Kiwi Saver is well structured		4.5% (90)	5.9% (118)	14.9% (300)	33.5% (672)	25.8% (517)	10.8% (217)	4.6% (93)	
The Government should cover the needs of retired people through the existing National Superannuation scheme rather than force people into additional savings schemes		8.3% (167)	14.7% (297)	17.4% (351)	17.9% (360)	15.9% (320)	10.8% (218)	15.0% (302)	
People on lower incomes should receive a greater Government contribution than the \$1,000 'kick start'		28.7% (579)	16.4% (330)	11.9% (241)	14.3% (289)	9.3% (188)	9.1% (183)	10.3% (207)	

Which of these statements is right for you?

n = 2015

I'm not eligible as I'm retired		160 7.94%
I'm eligible and probably will join Kiwi Saver		700 34.74%
I'm eligible and probably won't join Kiwi Saver		563 27.94%
I'm not eligible at the moment but probably will join when I am		200 9.93%
I'm not eligible now and probably won't join when I am		137 6.80%
Other/Not sure		255 12.66%

Last question on Kiwi Saver and superannuation...

n = 2001

Which of these comments reflects your financial outlook for retirement?

I simply haven't thought about it

		250 12.49%
I am facing or am likely to face severe financial difficulty in retirement		316 15.79%
I am managing or am likely to manage OK in retirement		807 40.33%
I am confident I'll be comfortable in my retirement		474 23.69%
Other (Please Specify)		154 7.70%

already enrolled in a super plan

Yes I think about it and am preparing and will be ready for it.

I am already in the old GSF

Already Retired

I am barely surviving on NZ Superannuation

I'm 80 years and I'm coping quite well.

Too early to tell, but more likely to be in between struggling and comfortable

I am not thinking about the financial aspects of retirement right now although I have started a savings scheme.

We currently can't afford to set money aside

I currently am a SAHM, my husband is working and is enrolled in the teacher's retirement scheme. I will join a superannuation scheme when I start paid employment in the future

I am managing because I have some savings to supplement the pension.

Trying to pretend its not going to happen

I'm on a Income Protection Claim - won't be eligible for Kiwi Saver as I don't work, and am not likely to be able to work. I will face severe difficulties in retirement

too far away for me to worry about yet

I am over 65 and receiving the "Super" but I am still working full time

My seven children have said they will look after my wife and I.

I have not made any plans for my retirement, as I'm still trying to work out how to afford my first house!

I'm hoping I'll have enough with state pensions and some UK pensionfunds, but it's probably too late to start saving now.

I have thought about it but my current situation makes it hard to save towards retirement.

I have an employer contributing scheme already as well as a private scheme

we have residual income from NM

I'll probably be saved by my inheritance

I have thought about it, but I don't if I will have enough money or not

am retired,kiwi saver no use for me

have thought about it but still not sure how i'll manage

Will not be as comfortable as I would have liked

Due to marriage break up I'll be very poor in retirement@age 50 and had children late i will be poor

I already have a superannuation scheme

first i will pay off my mortgage

I am focusing on paying off my mortgage and student debt at this time.

Not sure as I will still have a morgage on retirement

I have made my own plans for my retirement

Have thought about but have other priorities at this point

Retirement is only 10 years away and we are working diligently to try and have more than the current super as income

you haven't asked about people like myself who are already in the trss. It's my understanding you can't be in both?

thought about it a lot, but am unemployed and so don't have enough to start putting anything

aside, but will start putting money aside for retirement as soon as I get a job.

I am retired and managing

I have extensive plans, belong to a financial planning group, and intend to be well off in retirement

Still Paying for our house so not much left for savings

I am comfortable in retirement because of own planning and saving

am investing already in preparation for retirement. This scheme doesn't seem to cater for self employed, so would no doubt be worse off under it!

I'll cope but probably have no government assistance by then.

I am facing 'just getting by' in retirement

should be comfortable if current conditions continue

cant save while in debt, get rid of the debt first

Self-employed

I'm a 20 year old uni student. I'm thinking about getting a job before I think about retirement.

until I had worked in Australia where they have a compulsory scheme where the employer payes, I had only ever realyy thought about it occasionally. Now I feel strongly that it is a must to safe for retirement, It may be that Im just getting older and hav

Despite longtime contributing to Insce Companies' "Retirement" schemes, we still face financial difficulty in retirement

At this time my income is so low I can't afford to put aside anything.

I am already retired

Don't have the opportunity to save for retirement at present. (unemployed)

I am in a government super scheme through teaching

Although I'm managing now, we have a child with a severe disability that will be with us for longer than would be ususal. I worry about what we'll have to retire on.

I am discombobulated by the high NZD and my oseas funds

I'm 71 and as we were careful over the years we are now reasonably comfortable.

In a subsidised work scheme

I have an existing scheme but due to parental leave stand-downs it does not have in it what it would have.

It's a long term concern, but at least I'm thinking about it now!

We have an accountant because we run a business and have our own retirement plans

Believe the current system must stay in place

I am fortunate to have Govt Super at 58!

I am retired and find the existing income comfortable

I have thought about it a lot, but have not financially been able to do anything about it, so at this point, probably will be in severe financial difficulty in retirement.

I'm currently in a superannuation scheme

already have super scheme through my work

havent thought tht far ahead

Have suffered significant injuries, on ACC and have used my savings to live on until ACC FINALLY agreed to provide what they were legally obliged to do!!!!

I need to get onto it this year

I have no intention of retiring

Still young enough to do something about it. Came to NZ only 6 years ago.

Thought about, not done much about it, trying to set up for the first bit before getting too much done on the last bit.

I've had superannuation savings for over 10 years

Have joined an existing workplace scheme but don't know if it will be enough for a comfortable retirement

taking every day as it comes

I am confident IF the government doesn't penalise people for taking the initiative themselves fo rtheir future (eg managed funds, property, shares etc) by introducing other taxes such as

capital gains tax etc.

Looking at other investment options which provide greater return

I'm in a super scheme at work and have been for 8 years - this is why I probably won't join Kiwi Saver. This super scheme should put me into a comfortable zone when/if I retire.

We have a super scheme in place with my husbands job and are saving the maximum possible for our retirement. We will be comfortable when he retires.

I'm self-employed so my income varies greatly - sometimes I just have enough to cover the bills with none left over for even thinking about retirement or even short-term savings.

I am retired, and made good provision by both of us saving hard, as well as my GSF annuity. I am a national Exec Member of the Govt Superannuitants Assn, and give advice on such matters.

If I don't start soon I will face severe financial difficulty in retirement

Maybe I should start buying rentals

student got bigger problems at the moment

I am already part of an existing scheme

I don't expect to reach retirement age due to health problems but I am concentrating on paying my mortgage off early in order to pass that asset on to my 18 yr old daughter. If I do reach retirement age, I will manage ok on super and having borders.

I have considered my retirement but i don't have a job and so i can't save. I also have a loan to pay off

One of those who have not thought about it but know it's going to be a real issue so NEED to

I currently am a part of a superannuation scheme

I retired in 1989, but was forced to find casual work as the eligibility rules for National Super had been changed, and I did not become eligible for another 7.5 years. My wife, who is also retired, and I do the best we can on NZ Super, and our savings.

Every now and then I think about it and it scares me so I put it on the back burner

Retired

Right now is not a good time for me as I support my family solely on my income and need every cent sent to live.

I will be working past retirement age.

I'm 43 and have saved enough to retire through buying rentals already

Why retire?

I am unemployed, but, upgraded to care giver for my elderly parents. I have very little in my bank, though, not from a lack of trying to save. I just don't get enough money each week.

will inherit property etc at some point around retirement age

i need to do something about it.

already retired

At the moment I am focussing on paying off my mortgage - after that I will think more about retirement.

will wait and see

I have taken out a few policies, which is making me poor now, so that I can be more comfortable when I retire.

Still making plans towards managing financially in my retirement.

Am already comfortable through careful savings and high returning investments

all our saved monies for retirement have had to be withdrawn and used in the support of looking after and housing our severely disabled son so we rely heavily on Govt funding at aged 65

retired

We are saving to the limit of what we can but are still unsure if that will be sufficient

I think I will be ok but it will be a very quiet life

limited income/budget makes it difficult to save for retirement

4-8% of my wages is money I need now - can't afford

I am very confused, because I was retired, now I am widow.

not sure but will have house paid off at least.

I plan to have children and have them support me

I already save in a work scheme, although it probably won't be enough. Still paying a mortgage and putting a child thru uni -I can't do everything.

I might be comfortable in retirement, but am not sure. I am highly educated, and get bullied out of jobs because of it. Kiwisaver will not help with this.

currently i have superannuation with National bank

i plan to join the state service retirement scheme which has no kick start but employers match my contributions

one word for evryone----SAVE! SAVE !SAVE!

I spent 13 years on a benefit so never had means to save

I've thought about it but can't do anything at the moment because every penny is spent on getting from day to day

I'm in a superannuation scheme which will help with my retirement

Have some schemes already going but don't know what level I will have at the time

Have a small package existing which won't help a great deal but own property mortgage free and hope that is a good backup

i worry i will not be able to save enough for retirement. i have my own scheme which i volunarily joined, independant of my employer.

I have thought about it but honestly, try to ignore it

I have thought about it, but recognise I can't start just yet and intend to give it serious thought in 3-5 years time

I've thought a lot about it and the prospect is so daunting that i simply don't want to think about it right now. later, yes definitely later.

still trying to pay off student loan

Retired.

Retired @ receive half of deceased husbands super

I'm already retired

I am not managing now cant see much different on retirement, if there is still a benefit then will be better off

I might not even make it to the retirement age, my race on average die after that - then what happens to my kiwisaver??

Did not plan well. I expect to work til 70+. Should be OK.

retired

If the world doesn't change too much I'll be quite comfortable in retirement. But that's a big "if". I'm not confident in the longterm "nous" of the investment industry, to take into account ALL of the implications of Peak Oil and Climate Change.

Working on trying to catch up now

I am on an invalid's benefit so unlikely to have an luxuries in my retirement

Have a superannuation scheme with my employer

Not sure but tend to be optimistic

who wants to retire?

we should be able to manage I am not sure that that will be OK

I have started saving now - I have three savings plans, but currently am not able to contribute much so do not know whether or not I will be comfortable in retirement

Am already on a plan

I have my own scheme in place.

Thought about it but not been in a position to do anything about it

I have a rental house I plan to sell for money in my retirement

My public service superannuation has been and is a godsend

Think I am OK, but who would know what the next 30years will bring

haven't thought that far ahead yet

Somewhere between financial difficulty and manage OK

have thought about it and no I should do something

I will have some difficulty in retirement

How strongly do you agree with each of these statements? n = 2333

	Don't agree at all	Agree a little bit	Strongly agree	Don't know
The speed of my Internet connection is fine as is	48.0% (1107)	40.9% (943)	10.7% (247)	0.5% (11)
Improved Broadband coverage and speed across NZ should be a priority for the Government	7.6% (176)	21.7% (503)	69.1% (1601)	1.6% (38)
NZ business is constrained by current Broadband performance	6.6% (152)	23.6% (543)	57.3% (1319)	12.5% (288)

Do you think the Government should own the copper wire access network into homes and businesses across NZ, rather than Telecom? n = 2328

Yes		1497 64.30%
No		579 24.87%
Other		252 10.82%

IEAVE IT WITH tELECOM

No, but then i don't think Telecom should either!

I think that more than one company should own the wires access, compeition is crucial and the private sector can better provide that than government

Don't know

i think it should be across a few companies - not one set of peoples
not too sure

When they sold Telecom it went forever

jv with telecom and other partners including govt

dunno, what diff would this make?

I don't know

Not sure

I'm not convinced the government would be reliable enough to mainain it. But it does need to be controlled independently from Telecom.

don't know

I do no believe government reacts quickly and efficiently enough to be in charge

I reckon other companies should have a piece of the cake, ie, competition to get cheaper wiring etc. Not entirely sure about the current situation.

Yes.. but they would need to buy it back.

yes, in fact they used to

undecided

maybe ????

Government should invest to get up to speed, And Telecom should sell old copperlines and exchanges to private investment.

It does not have to owned by the Govt. but must be owned by somebody who will keep up with current technology

Owned by house owner

I agree but we sold them to telecom

not sure

They should have a voice in how it's dealt with.

It depends. Either the government buys it, and as a priority builds a modern network, or it hires someone outside to do it.

a left wing govt would make the govt ownership worth while but a right wing govt wouldn't invest the amount needed i.e its a question of tax or cost to the users of a privatised product

Only if the Government can upgrade it and maintain it without spending too much money on it.

No, they should invest in fibre optics like in AUS currently.

anyone who will commit to maintaining it

Yes, and they should charge Telecom etc for using it. Charge them the amount it costs to maintain and upgrade it.

Not sure

Perhaps it could be Council-owned and part of the rates set-up.

I am not sure whether ownership of the copper wires would or wouldn't make a major difference

Fibre optic is the only way to go for who ever has control

after a period of time, it should be each household

Not sure

Ideally, but I'm sure the government would underinvest if they did

not sure

maybe an independent body apart from telecom so that no monopoly occurs, and someone apart from the govt coz i don't think their organisations are efficiently run...

Either Government, or open it up to competition

Not sure

don't know- just make it faster!

dont know

Yes as it will open up the competition on the provisor that the government doesnt over charge rental

i think there should be a combination between comapnies and the government so there is an even balance of government imput and consumer priorities

Copper wire is out-dated, it should be replaced

there should be competition

unsure

Yes - They used to own it 20 years ago (1987)

There should be other options such as celular connection & competition

I really don't know who should own it - but I do think it should be a lot more affordable!

A seperate company, not a telecom service provider

Not sure

dont know

No, they shouldn't, but neither should Telecome either

Should be owned by multiple companies

This should be open to private venture to increase competition

don't know

need more info

all telcoes by a share from the govt or a holding body

not sure

More than one business should own it

They did - until Telecom became a separate entity!

not necessarily the govt, but someone other than telecom.

yes, as a non profit organisation

dont know

Don't know enough about this to comment

Never thought about it, ddidn't know that they did

A company separate to Telecom

I'm not sure I know enough about the pros & cons to answer this

No comment .Each can be a liability on this issue.TC is

not sure

I would say I don't know enough about it to know who should own it.

copper wire is not good enough, it wasted the energy through the transit. Government should own and upgard the wire to more energy saving one.

by government I include a quango not telecomm

I don't know if the Govt SHOULD own it, but I hate that Telecom owns it and gives such crappy service!!!

Don't know enough to comment

dont know

Not sure

i dont mind - but the government should have a strong opinion about what is a minimum performance standard and enforce it through legislation if necessary

it's the govt's job to maintain policies and procedures to prevent monopolies or abuse, but not necessarily to own it. It shouldn't be a monopoly though

joint ownership between Telecom, Govt and people of NZ (shares)

If Telecom can't sort it out now - why would the Government

It should be joint owned by all providers of telephone systems and Internet services, with all sharing in maintenance as well as benefits

Doesn't matter as long as they manage it

Don't know if that would improve the problem or not

Yes, but it should of never been sold!!!! Now to late, would cost us a fortune to purchase back what was sold in a Fire Sale!!!!

Which ever is cheaper for the user

Not worried about who owns it -just that we get superior speed for all the money we pay

there should be competition amomgest firms for doing this

Maybe an SOE (so, nearly a "yes")

DNK

i think there should be more than one owner so no one has a monopoly

I don't know anything about it

Its yet another effect of our Govt assets disposal fiasco

I believe the Government should own a fibre network across the country, providing fibre and WiMAX connections for free (tax). Traffic out of the network would be charged by ISPs

that's a hard one I think the Govt. should own it but with something in place so that them and any future Govt can't ever sell or lease it

Hard to say, one lot is as bad as the other

Someone who has monetary advantage in keeping it in good repair

it doesnt matter who owns it, its still bad

not sure

Gov't should be investing in a fiber network, not copper

NO! But Telecom is probably not the best service to own. Less restrictive access to other players.

if it was real copper it would be faster

either the Govt. or a Coop of all Telcos

share between networks

still undecided

cellular can be fast and put in place by anyone who can get resource consent to put up towers.

Dont care so long as it is running properly

Should never have sold telecom in the first place, but, no, not unless they can pay a competitive price for it ie. one that Telecom is prepared to genuinely accept without pressure to do so.

If not the government, then an organisation who is contracted to provide the level of service or suffer SIGNIFICANT penanties if they don't.

I don't think it should be dominated by one company.

don't know the implications of either option

Don't think that would help

unsure

It's an option, but maybe not quite so black and white
not sure

I say no to the answer, but the Govt should make sure lines are upgraded regularly

Don't know the price could sky rocket up ????

Private

Telecom is not performing especially given their profits, however I have no faith that the Government could sort this problem.

Note sure that would solve anything

Not Telecom, but would the Gov. be any better?

don't know

No.. Why should the tax payer pay for Telecom's failures??

The idea is good but the model used for electricity hasn't worked.

Don't know

why? so they can sell it any way

Well they used to, but hindsight is a wonderful thing.

don't know

Not Government or Telecom

not too sure what copper wire access is?

not convinced gov't ownership would improve things

I don't think either should own it

Not sure. if gov't owned it would they be any better?

Privately owned but not a monopoly

Don't know

It should be private and Telecom shouldn't have a monopoly

Those who will benefit profitably should take at minimum some ownership

Other telecommunication companies should be able to purchase them so that there is more competition and more competitive pricing.

NZ should go to an open access network option

Not sure

Not sure

I'm not sure! But, one thing's for sure, there MUST be access for whoever wants to use the Network. It would be grossly unfair to hinder Communications, whatever form they are, by monopolising the network by one provider.

If I knew what sort of an impact a government-owned broadband system would have on pricing and availability, then I could answer

Other companies should be allowed to share in the responsibility and get rid of this monopoly

don't care

not sure much of a muchness really

I wouldn't mind telecom owning it as long as they do what's best for NZ rather than themselves

don't know, whatever is best for the consumer

Owned by an independent organisation ie coop of users who buy it from telecom

no, but with strict regulation

Any option where there isn't a monopoly and therefore exorbitant rental compared to other countries.

unsure, gov't may increase price to fill their own coffers!

Don't know what that would entail.

Should be held by a third party even in a similar manner to BCL

Telecom has ADSL2 ready to launch, however, if they do, when the government finally does get its "a" into "g" and go through with the unbundling, the vodafones and ihugs will get access to that service free. Telecom is not to blame slow internet.

not sure of the implications of gov't owning them

Crown entity - same as transmission network - bcl

An Impartial Board, or trust, non profit save for allowances for development and expansion

don

not necessarily

Yes but they shouldn't be able to take it back as they were stupid enough to sell it

don't know

If it means cheaper prices then telecom. yes

Should be joint responsibility of all Telecoms.

Don't know

The people of New Zealand should own all of the essential infrastructure directly themselves. It should be administered by an elected trust. We must keep the sticky paws of both the government and big business off our assets. Every girl knows that.

They definitely should maintain some control.

Foster increased competition

Only if they're going to do something about it

Telecom has been raped of its funds by the initial private owners and little investment has occurred since. Exactly who should own it I'm not certain but telecom needs to invest more or be bought out by the govt.

don't think govt should own anything, it doesn't manage anything well but don't think Telecom was great either altho' better now there is competition

no government, but to split with other companies, no telecom monopoly

Unsure

Only if this means cheaper and better charges/access for us as consumers.

not sure that the Govt would treat as a priority

depends on how they 'control' it

haven't given this topic any thought

the people who are profiting from the Internet connection should be upgrading the copper wire, why should the tax payer have to fund it when they are already paying internet connection fees.

I think the people of NZ who are able to invest should own it

If it means it will become free!

The network provider should be independent of the service provider

Yes if it is profitable for the government, if not then Telecom should remain as the owner.

ownership not the problem upgrading is

don't know

not sure

Taxpayers/subscribers have already paid for it once

The Government should build a new fibre network that will put us ahead of other countries rather than always trying to play catch up.

They should be owned by a publicly owned trust like the power network

owned by an independent body

Could be like electricity system but would be hard to work it well

private infrastructure company preferred govt better than telecom

Govt owns telecom anyway, what is the difference

DONT KNOW

i think that would be worse than telecom

not sure. one the one hand, i rather would pay the fee to our government, but don't wanna give too much control to it.

not sure

My answer would be yes, BUT only with monitoring and accountability

don't know, don't understand it, but they'd just sell it off anyway!

I don't know enough about it

Either the government needs to take it back or they need much tougher legislation to rein in the operator of the network.

trust the gov or telecom?HMMM?

I think it should be jointly owned by the companies that use the bandwidth

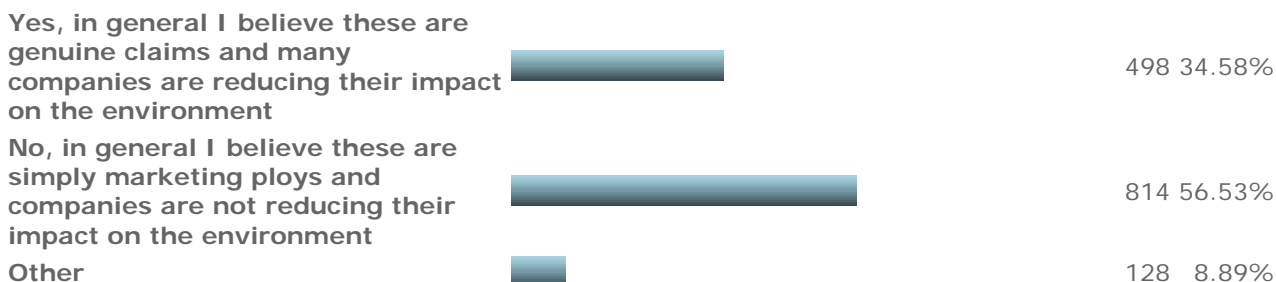

I disagreed about the Government making it a priority, as i believe it was Telecom's responsibility to get us upto speed of the world. But, I do think the Government may fair better if in there hands than it has

been in Telecom's.
 Not sure
 It should provide both copper and fibre infrastructure
 there should be more than just telecom owning the network
 I don't know
 If it you are asking for me to choose between Telecom and the Government, then the Government would probably be better.
 Not sure on this Joint rather than a monopoly would probably be best
 a company independant of ISP,s
 The Government or local communities (e.g. Trusts or LATES) should own all essential infrastructure, allowing companies to bid to use or install better infrastructure (e.g. fibre optic network)
 Telecom was sold to Telecom so everything should have been Telecom from there on.
 Don't know
 Telecom should be made to pay for the upgrade tp these wires first as they have made huge profits and not put much of it back into the infrastructure that gave them those profits.
 Ownership by utility company, whether state-owned or otherwise
 Let those who use it own it
 whoever the most innovative company is should have the rights to it.
 don't know
 Not sure. unfortunately any one owner has control over cost etc and no accountability.
 Not necessarily but it couldn't hurt if they did. Not a resounding "yes", but more a "maybe"
 unsure
 ?
 Notsure about that
 Infrastructure requires government funding as a beginning point.
 i don't know!
 do you really think they can do a better job
 people should
 NO THE GOVERNMENT SHOULD LAY THE FIBRE OPTIC CABLE AND OWN IT.FORCE TELECOM OUT
 not entirely sure that either option is good
 Telecommunications should mot have been privatised
 All phone companies have a share
 am not sure
 Legislate on copper network or access for remote people

Many companies now claim that they closely monitor and minimise the impact they make on the environment.

n = 1440

In general, do you believe that companies are genuine in these claims and that their environmental impact is reducing?

In each of these industries, can you think of one company who makes 'clean green' claims, which

Feel free to leave a line blank if you can't think of anyone but if a company does spring to mind, doing that is good...

The fuel industry	The energy industry (excluding Fuel)	The transport or car industry	A retailer	A NZ
BP	Genesis Energy	Toyota	Bunnings	
Shell	Meridian	Toyota	Body Shop	I
BP	Contact	Toyota, Lexus, Audi	The Warehouse	Icebreak
none - why are we running cars on water or other sources - which are supposed to be better for environment	Meridian Energy Genesis - use of wind turbines, etc - atleast they are trying	Smart Car VW Citroen Hyundai Fiat Peugeot Honda Rail	Commonsense Organics	Unt
Their are several independent people who are trying to make cleaner fuel eg the couple in Timaru. None BP none shell. fuel that lasts longer and although it does it is of such a mininal amount to make the claim of a purely money grabbing exercise. A few years ago BP tested 'Low Sulphur' Diesel fuel here in Christchurch for about 12 months before it was released nationally. Well they sort of did. The fuel that they released after the 12 month trial was definitely NOT the same as the fuel that I used for that year and subsequently I stopped using BP products immediatly that this fuel changed. From this I deduce that BP decided that the fuel that I used during the trial was A/ Not as beneficial to the	Cannot rememer the company, it may be Meridian, who claim that all their electricity generation methods are environmentally sound. I believe this is largely true. Ellectricity companies by using wind and looking to developpe wave and tidal power generation Some of the electric companies are being proactive Meridian Energy Meridian companys that run wind turbines to generate electricity Meridian Energy and it's wind farms Windflow Technology some of the power cos Bay Of Plenty Electricity Meridian - only certified carbon neutral provider -the wind farms The one with the nice TV ads Gas supplies eg genesis Power companies with wind farms. Genesis & Mercury Meridian Wind farms are definitely helping the environment as they produce electricity without destroying the environment. Wind farms, Contact? Genesis Wind farms None Contact genesis As above. These folk too are NOT in the game to save the whales or any	Toyota toyota (prius) toyota The transport industry is a nightmare but generally I don't think that you can blame truckers for seeing a niche (created by the demolition of the rail industry) and filling it. But if you consider the utter stupidity of 1000 trucks storming up and down NZ every night on ever deteriorating roads that run most of the way RIGHT BESIDE THE RAIL TRACKS you just have wonder what the hell we were thinking. If you look to major European cities such as Frankfurt, Zurich & London you don't see these folk tearing up their railway lines and using them for landscaping do you? Richard Prebble must have been high on his wife's beetle nuts when he sold NZ Rail and we were crazy for letting him. Similarly, the automotive industry are no-one's friend. Toyota with their Prius and Honda with whatever their Hybrid is called have not provided us with these new energy efficient vehicles because they care about the environment, they have done this because they were astute enough to see that this is where we must head and they want to be the best at it. You can't blame them for that. The Yanks tried Hybrid cars on their population but they went down in flames because the whole concept was way beyond the comprehension of your average dumb, redneck hillbilly American. If you really think that the auto industry IS really interested in saving the planet ask them why they don't produce products that will last longer? Where does all the plastic, vinyl, glass and pressed cardboard from scrapped cars go? Into the Landfill of course. Very little is recycled so don't think that the engineers and designers at Toyota, Audi et al are staying awake at night trying to save the planet. Toll Rail when they transport their customers products on rail. It is far greener than the long distance trucking industry, less carbon produced and less	of the fastest growing retail outlets in recent times. These days at the Checkout the staff member - Oops, sorry - TEAM member - will ask if you need a bag for your purchase? You are supposed to think 'WOW, what a proactive thing to ask.' So you say "No thanks, I'm with you guys when it comes to saving the planet." Next time as you are leaving though have a peak around the back of the store at the rows of dumpsters and the huge piles of rubbish waiting to be taken to the Landfill. Hmmm! The warehouse The Warehouse - using technology to switch lighting on or off depending on how bright it is outside AlBrite recyclers nope Woolworths check-out asking if you NEED a bag - small, but a start. the body shop Body Shop - eg, non testing on animals etc. Wharehouse - trying to limit use of plastic bags and minimal power output for lighting Bunnings getting rid of plastic bags. green issue is hysteria and poppycock. DSOME vehicles should be pernalised -RVs - but NZ is relatively pure yet is overreacting. BP for the use of solar energy on their stations BP BP - solar development Not hearing of the 'big' companies putting money in green fules, just 'cleaning' the present product. BP are claiming they are (& I'd really, really like to believe them...)	stuff - but I don't truly believe they are, and I want to change to Meridian. Meridian - wind energy Meridian Trustpower Wind farms Meridian Energy (with the windmills) Meridian I hope the pwers that be DO NOT choose to go nuclear. meridian? I know one of them is particularly proactive but I have forgotten which company it is ... Grrr... Hume Gas (now Nova) say their gas is clean and green... BUT it is LPG that is optimised for automotive use and absolutely unsuitable for domestic purposes because it consists of mostly butane, rather than propane which is necessary for domestic appliances. We use LPG to heat our hot water thru a modern Califont and for a 4 burner gas cooking hob. Nova gas a 65Kg cylinder of butane/propane mix goes in 2 months.. BUT with ON GAS who provide us with a propane/butane gas blend, we get 4 months usage to a 65Kg cylinder at about the same cost as Nova's tragic effort. Wind power increasing wind farming trustpower Meridian energy	toyota Volkswagen are making a good effort with high tech new diesels and the new TSI twincharger engine. some car manufacturers are trying to push hybrids, but they are still out of the range for normal people to use, too expensive, etc... and also when really looked at closely the fuel efficiency claims don't stand up under every day circumstances. ie the Prius is efficient when driven in some ways, but not others, and overall sometimes it appears it's actually less efficient than some non-hybrid vehicles with better fuel economy and efficiency. Honda tops the poll, but forget hybrids.. when are we getting to the really green stuff? Enough concept cars already. Start selling them. And how much energy still goes into making a car, the most self indulgent form of transport on Earth? Toyota low emission engines in cars I think Ford do Cleaner fuel emissions Toyota Nope. Half hearted attempts at best. But as long ah a Humvee is highly sought after what hope do we have! Making hybrid cars Checking excess emissions from exhausts Making Hybrid cars Mitsubishi The Government is interfering with something it knows very little about Toyota, Honda: hybrids and fuel cell research. (GM have a hybrid too recently) honda, Prius car is a hybrid, others coming on the market. Toyota Newer cars are inarguably more fuel-efficient and cleaner than older models. More small, clean-burning diesels from Europe would be great, as would much reduced road-user charges for small diesels. Auckland Airport- replacing incinerator None hybrid Toyota Peugeot - HDI diesel vehicles -	body shop iag The Warehouse - trying to reduce the number of plastic bags used Hardys Health Stores can't think of any. Only the village of .. Woodbury? in the UK that has banned the use of plastic bags in their shops, has reverted back to greaseproof paper and cloth bags. And good on them. no All major supermarkets are encouraging use of recyclable shopping bags even though they a little more time consuming for the check-out operator. Of course this doesn't offset the huge waste and plastic in modern packaging of most items in the supermarkets. x Eco store It is good that most suppermarkets now offer reusable shopping bags that are cheap but the plastic bags are still in wide use. Can they not change to recycled paperbags which is more wide spread in USA. Nothing really springs to mind. The supermarkets recycling plastic bags and/or promoting use of reusable bags is something. Body Shop The Warehouse with their recycling bins New Generation claning products common sense organics bunnings reduction of plastic bags with clean green bags The Warehouse. trade aid Some suouermarkets by decreasing free availability of plastic bags. petrol. And planting trees to balance their carbon emissions, Have not heard anything from the major fuel companies. bp BP (crooks and thieves) who are price leaders, go on and on about being clean and green: but the reality is they spend all night "reading" Penthouse... nope... they merely look at the pictures! New types of fuel eg thro' use of reject cooking oil from the fish and chip industry. B.P All the companies seem to be busy with some research and developement. BP bp An oxymoron, surely. None low sulphur diesel imported to Gull stations are looking into low carbon fuel What Big Oil! Clean Green fuel industry. An oxymoron if I ever heard of one. BP Well not really BP Diesel is cleaner than Government thinks Shell who use solar power to support their gas stations- but that is almost a retail situation. Their petrol is	using natural energy Meridian Energy meridian Meridian are doing okay given their use of wind power but then this is offset by other more intrusive power generation schemes. Wind also has its disadvantages as can be seen with the NIMBY's in Makara and the Manawatu. some of the energy companies do seem to be trying to look into renewable energy, but whether or not they really are doing it for appearance sake, or legitimate reasons, I'm not too sure. Many of NZ's power companies either operate or are proposing windfarms that power many thousands of homes. Gold Star for them. None wind farms Well the generation companies seem to be working hard at carbon neutral projects, pity the RMA causes them to jump through 1,000,001 hoops. Wind Farms mostly by the electricity companies Meridian Energy Meridian: Windfarms windflow teqnologies, nz windfarms Vector who are putting in wind power and most of our electricity is hydro and thus 'green'. Energy	great economy and with exhaust filters ? that car, the umm, modified petrol one Toyota Prius and Honda Civic Hybrid Toyota - hybrid cars no Toyota and Honda are producing hybrid cars. Honda - producing brands of cars that are reducing emissions significantly. Slowly improving the efficiencies of the engine. Toyota, Honda I think the new hybrid cars are promising and hope that the claims are genuine. Toyota Prius hybrid car. Are there any others? Smart Cars honda toyota Smart Cars, Toyota, toyota prius honda, i think they're the ones with the petrol/electric cars? Honda and toyota with their alternative powered cars. Toyota. The development of the hybrid car. Exploration into different types of fuels is on-going, but results and appropriate vehicles marketed to the public more as 'toys' rather than saleable, economical and attractive product. BP, saying they recycle water methane fuel maybe toyota, Renault Toyota - cars that run on electricity or petrol yes Toyota for hybrid vehicle manufacture Prius seems pretty genuine although they don't seem to make compact cars. The public transport system in Auckland is at least trying although there is still much to be done. I don't believe anything the airlines say as their business is so fundamentally polluting as it is. prius (toyota?). no toyota Toyota - developing the Prius car, a serious effort at reducing the impact of cars on the environment toyota mercedes	Trade Aid. INVO, the owner rewards it's workers for being clean green,they do a lot of energy saving in the work place and supply workers with energy saving light bulbs and more outside of the work place. The Warehouse pak n save, the warehouse, foodtown etc all promote not using plastic bags. for years the warehouse has promoted using natural lighting instead of heaps of artificial lighting instore. most organic/wholefood shops, some health product suppliers,The Warehouse new world living nature cosmetics toyota the Warehouse and Pak'n'Save. Pak'n'Save is misleading, while they don't provide free bags they do provide them at a cost. The warehouse do dim their lighting and lower the temperature adjustment on their air-conditioning/heating, and they also have a bag recovery service at most stores. They have also had counter signs for some time promoting 'no bags' options for customers. BODY SHOP Commonsense Organics! The green-ness is part of their whole approach - and it means their brand is increasing in value every year. The Warehouse EcoStore the Warehouse Reduce packaging. Expect shoppers to bring their own reusable containers Not Sure bunnings warehouse and a lot of supermarkets have boycotted plastic bags. commonsense organics none All supermarket chains are selling reusable shopping bags to reduce	Has enough trying to be green. would be?) None at the moment but if one of them starts selling biodiesel at the pumps that would be a start. BP BP when they talk about recycling the car washing water BP trying hard BP, maybe slightly genuine BP seems to be trying with diesel greenability. BP has a strong commitment to minimise the environmental impact of its activities BP no one BP - recycling carwash water (very minimal effort) no In general this is a joke. BP claims to be green but I don't believe it. There is no such thing as "green" petrol. Most companies are putting a pittance into researching alternative fuels. BP BP - solar panels bp - solar power no BP BP - not sure, but I think their marketing emphasises it. Maybe a more efficient fuel or something? bp bp BP and Shell both make the claims but I have doubts that they are as clean and green as they claim. BP	a gesture at least with the wind turbines. NZ's hydro power is pretty clean and green compared to most. Genesis Energy - Wind farms meridian contact Genisis Meridian energy say they are carbon free(think that is the phrase). Wind farms but I cannot remember the company name. Contact Power company - being committed to being carbon neutral. Meridian no one possibly yes Huntly Energy Efficiency Trust for retrofitting insulation into homes Meridian - and I believe them. I am a loyal customer of theirs. We have weighed up the situation and gone with what we feel is the lesser of the evils, despite the problems with hydro. Meridian mostly marketing ploys, but all the big ones are starting to promote environmentalism. can't think of any specific examples though sorry. no Genesis meridian Mercury make the claims but, again, I have my doubts. Windfarms are certainly cleaner and greener than solid fuel but my understanding is that their	Who produced a hybrid car? Honda? The Clean Green Car Company Clean Green car company promoting hybrid vehicle sales Toyota - introduction of Pirus - Hybrid car Making cars that don't run on petrol or diesel BMW some public transport companies use electricity which I think is good. Cars a getting more fuel efficient across the board, but I beleive that all the extras they are now adding to cars are costing the environment toyota.prius Hybride cars Christchurch Bus Co looking at other fuels those hydrogen cars Makers of hybrid cars Honda hybrid Toyota The monitoring of Japanese imports ensuring that our vehicles run more cleanly. The implementation of standards that ensure this. Wish cost of warrants would come down though. no The hybrid cars - Toyota I have heard of, that run on a fraction of the fuel by utilising braking for creating power. Great around town for efficiency - though I note that long distance they are about the same as any other because there isn't as much braking on those trips. Toyota Hybrid clean green car company Toyota - Introduced the Prius dual electric/petrol car to reduce fuel usage and emissions ? no clean green car company Toyota biofuel...in Bougainville cars run solely on coconut oil....no petroleum products there Toyota with their Prius - combining gas and electric motors. Toyota - Prius Hybrid, Mitsubishi and Sabaru also working on smarter concepts and maintaining all wheel drive, BMW, Mercedes, recyclable content in vehicles	guess is really the government's responsibility. All NZ should take a leaf outta Collingwood's book - no plastic bags at retailers. Only use recycled and/or biodegradable bags McDonalds. They use local ingredients (according to their advertising) which I see as supporting the local environment. Binn Inn Pak n Save. They don't hand out a million plastic shopping bags to you every time you shop. Countdown, they have reuseable bags available for purchase at the checkout. Bunnings GREEN GROCERS The Body shop Hubbards The Warehouse The Warehouse uses recycled materials (plastics and paper) for wrappings and minimises packaging. The Warehouse Ecostore Supermarkets providing reusable grocery bags I don't know honestly. I haven't heard any retailers claiming that they're being more green, except for Apple computers, and I believe them because I am a humble disciple of their brilliant programming skills and beautifully constructed computers. Woolworths & Foodtown sell green bags cheaply,& have signs reminding people about using less plastic bags. No real efforts here except for the supermarkets shopping bags who do seem to be making an effort but is this more about profit making? BP	windfarm/s	etc	None	
Is it BP that "cleans" the waste water from the carwash? BP also invests in solar electric technology development. BP with their solar powered petrol station and water recycling. Alternative cheaper fuels should be explored. If a car will run on water why not. Fuel companies will still exist making by products and plastics. Vegetable oil production puts too much strain on the environment BP who actually are powering at present four of their service stations entirely from the sun, and are planning to set up more in the future shell, my local shell petrol station just ripped up their nice cobble stone fore court to lay plain concrete as they were informed that cobble stones allow spilt fuel to seep through and harm the environment. BP not one company in the fuel industry Shell In view of the generally accepted idea that fuel companies have blocked the development of	provide only a tiny percentage of energy. Meridian - they are genuinely working on sustainability Meridianoan Energy wind farms Meridian Energy Meridian is valid in claiming clean renewable energy generation (from hydro and wind). Meridian Electricity should be green friendly without being nuclear. All homes fitted with solar panels. Use government assisted installments. Allow wind farms etc. hydro In the South Island there are new large Wind Farms being planned for Electric Power generation, and we have had Hydro in both Islands for ever since I can remember (& I am 68 !!) Ford and others are working on & have working Fuel Cell cars, but I heard on the radio National Programme last week that they had an electric 4 seater car with ten prototypes produced that could cruise at 100kmph for at least 300km but suddenly they retrieved them from the people who were testing them for no apparent reason, and crushed them, without any explanation, leaving themselves open	Most manufacturers by changing the economy of some of their cars AIR NEW ZEALAND GETTING MORE FUEL EFFICIENT AIRCRAFTS Toyota Hybrid Cars, Honda Hybrid Cars, LExus Hybrid cars Toyota - hybrid Toyota Toyota is one of several Japanese manufacturers that are looking at alternatives to fuel driven engines (photoelectric cells). Toyota Honda- hybrid cars, planting trees to offset carbon emissions The "Four Two" is an innovative and economic development in car passenger travel. Hybrids, Virgin's plans to start using Biofuel toyota I think hybrid cars are becoming a popular option now largely driven by some of the more elite car brands Lexus and Merc pushing forward. This is a genuine response to an obviously growing market. Lexus hybrid cars Trying to make cars more energy efficient and reducing exhaust emisions No such thing These guys are getting into hybrid motors which can only be good but they are still very expensive and I believe work well as a marketing ploy to relieve the concious on the industry. I am still following this one also with interest and hope. They have at least made a start with producing hybrid cars - Toyota Prius and Honda Civic Hybrid Toyota Prius hybrid cars, and other car companies looking at alternative fuel sources Hybrid car other than honda and toyota none seem to be wanting to work towards the "green" end they mouth off (general motors but it is some time it is their philosophy which is wrong once again look at toyota and honda at least those are doing something again management are paid on results A lot of very "green" engine options now available from a	I think allot of retailers havn't done anything to lower there environmental impact. Some have introduced re-usable bags instead of plastic, I think this is a great step forward. Trilogy (face creams) - NZ company Body Shop - I believe they "were" green - but now have a new owner & saw something about them testing animals now, but feel they are genuinely "green" in other ways. Living Nature... not aware Clean Waste supermarket chains promoting reusable bags rather than plastic Officemax Pak n save untouched world Body Shop Eco Store, Vodafone, The Warehouse, The Body Shop The only ones I can think of are Vic Books in Wellington for using good old fashioned paper bags instead of plastic ones. Also, Pak N' Save for the whole saving plastic bags and money. Mostly show with some exceptions such as the Body Shop Warehouse uses worm farms to reduce their waste. Unfortunately I can list several who contribute significantly to waste - any of the major chains - Warehouse, Farmers, Briscoes, etc ... Common Sense Organics-Wellington Bodyworks Body shop No.Apart from those who market natural products or goods made from recycled or recyclable materials. The levy on plastic bags scheme is being used as a sales ploy J Ballantyne & Co new world sometimes good - organic food wise	Fis oranic he eco clea generatio Trying to Some ai but until i is av: constrain energy : Some Fonterra, reduce th Howeve places li avoid th: suddenly develop got commr response. implem: emi Can Fisher an energy t applicanc if they : their Trilogy Rubbis taken to conserv shut all and don't stations. contains so we The on neutral C Hawke Nor biodegr: F& there a around v swa eco: Generally do make feels the: they think a Fisher a

alternative fuels for years, it seems hard to think they are serious about 'clean green'. I do know Shell stations have emergency response kits on their forecourts to deal with oil spill, which is quite greenish. others may too, but as I mostly go to Shell, I only know about them. bp i believe their claims could be genuine, but i'm not sure that this exonerates the industry for its american geo-political alignments some BP Service Stations use solar power which is good for the environmant BP BP - cleaner fuel BP bp None - They are just into the image for marketing! Shell having 98 octane fuel to make engines cleaner, No one BP - recycling water in the car wash BP B.P BP - have changed/reduced additives to fuel. Recycle car wash water BP Additive's to fuel to make it burn cleaner BP none Coal and mining . bp with solar	to accusations of bowing to pressures from the oil industry !! the wind farm reduces damage to water supply areas as well as the big power station converters Mercury wind power solar power Wind turbine industry Meridian, no use of coal/gas fired generation. companies looking at windpower those power companies who utilise wind farms are doing their bit for the environment, eg Meridian, the public who grizzle about them are not helping though Meridian Meridian Energy - alternative options to generate energy wind farms Meridian. searching for sources of alternative power No one Meridian Energy - carbon neutral Mercury - constant advice to consumer on power savings tips. Genesis Meridian energy don't know meridian,wind and hydro State Coal Meridian Contact energy Wind Farms Solar energy companies Windpower is a positive. renewable resources no One of the power companies was	variety of manufacturers. This sector is in large part dictated to by fuel companies & they tend to sponsor Hi technology and expensive options rather than getting back to basics Toyota would be the classic example I think that there should be more hybrid cars on the market, prehaps at a discountent price. There could also be a new law to make any new car sold a hybrid so there would be a gradual change from cars that fully rely on petrol. Companies that make hybrids Not sure of the company, but the ones that are creating the "electric" cars I think would be genuine. Honda, Toyota no Hybrid cars. Not really as yet. BP car wash that recycles its wash water Ford - they have a couple of "eco" cars in NZ at the moment - the cars use ethanol Honda and Toyota hybrid cars - however I believe that profit still over-rides ecological responsibility Toyota Prius Toyota Smart cars toyota Hyundai Toyota, Honda Stagecoach Bus - Wellington only because of the Trolley buses BMW their h2o cars, Virgin Air looking at using bio fuel. Toyota Toyota for their Prius! Props to them. One industry that is making an effort but I still feel should be doing better Toyota All show hybrids - prius Honda, Toyota, Low emmision and Hybrid cars. I have heard of the hybrid cars and they are getting promoted well on the Wasted program on tv3 This is a joke - there is VERY LITTLE done to reduce vehicle emissions. Poor fuel choices are common (the high sulphur diesel for example) - Road user	Warehouse - Starbucks, using recycled material for cardboard products, Countdown, encouraging customers to put more items per bag & buy eco bags The body Shop.The Health food shops. Ecostore - did it before it was cool Mitre 10: Doing away with non-recyclable plastic bags. The Warehouse - for all it's just cheap imports, they have considerably supported Zero Waste throughout NZ Pak n Save, even if it's a way to save money, charging for shopping bags is a great way to reduce the impact of plastics on the environment No. Resene paint - collection/recycling of unused paint. Less toxic paint formulations. Bunnings charge for plastic carry bags Trade Aid? - selecting where its products come from - presumably taking into account "clean green"issues Supermarkets, and the warehouse are encouraging people to bring back clean used plastic bags, and selling alternative re-useable bags. The body shop Manukau City is now taking more recycling items Warehouse The Eco store has all environmentally friendly products Pak n Save Rosedale Organics The recycle food trials in Wellington recently initiated by council to reduce (mainly food) waste. <p>moment not making any difference at all biofuel companies BP Mobil Caltex BP, low sulphur Diesel BP has advertised some clean green ideas but I cannot specifically think of them off hand. BP does provide some genuine attempts (Solar power, recycling of water at the car washes) - BUT - are they developing low sulphur diesel? NO. Are they going to ethanol based/partially ethanol based fuels? NO. (These ethanol enhanced fuels for example have been in place in Canada for some 10-15 YEARS) ... BP BP service stations are slowly becoming solar powered No. I think any of the claims are marketing puff BP most know they have to BP oxymoron. where have the biofuels gone? and the electric car? !!!! you must be joking BP BP - They have their special petrol (the blue handle at the pumps) not sure exactly how it is different but their ads have</p>	<p>explore offshore tidal generation - until that is up for consideration I do not consider energy companies to be genuine in their claims of clean and green. solar power, wind Contact Energy Mercury I don't believe that adequate carbon/SO2 scrubbers are being employed on the Coal Fired power generating sites. There is considerable impact on draw-down of water (and resulting land compression) at some of the geothermal sites, only recently has full reinjection being done. (MOKAI's plant - Contact Energy - is a notable exception - this is a first class plant). Some plants still recycle heated water into streams Meridian Genesis I think they have wind towers meridian - they are looking for alternative energy sources that are less polluting to the environment like wind power, solar etc. Genesis Electricity Companies that are pursuing increases in production of power from geothermal sources. I don't think wind farms are the way to go. They are unsightly and noisy Meridian most power companys</p>	<p>I believe in Auckland they are reducing the amount of cars that enter into Auckland by bus transport coming from North Shore. That helps the environment by not many cars going to work everyday. hybrid cars (don't know brands) Tranz rail say it cleaner to take the train Honda with their tree fund. getting better rail service buses. They are trying to make this method of transport more appealing. However the buses should also be more 'green' too. Toyota Hybrids I car Not at all! Clean Green Car Company - sells hybrid cars. Toyota with their Hybrid cars toyota Toyota Ultralight rail companies such as Parry in the UK. Bicycle manufacturers possibly ford with their new hybrid car Toyota, Honda Hybrid cars. Fuel efficient engines. Improving small cars and making them attractive to but. Toyota Honda Toyota - hybrid car Toyota hybrid cars. ARC buses with hybrid diesel engines Toyota - hybrid vehicles Hybrid cars toyota I guess the hybrid cars but yet to be proved on country roads Bicycle manufacturers The Clean Green Car Company the hybrid car company launched recently There's hybrid cars, but I can't remember who makes them Of course. Hybrids are gaining popularity and availability. We have built more roads under labour govt and done little for public transport electric cars possibly - though cars running on air/water/applejuice/shit have been invented, the oil companies hijack them and keep them unavailable as an option - this is wrong! the Hybrid car makers Hybrid cars</p>	<p>what I have seen of the way it works) Progressive Enterprises The Warehouse bunnings warehouse Body shop Organic food retailers. organic health shops NO I believe the Freezing companies have improved their "effluent" quality by installing holding ponds etc. The Warehouse does have a scheme for reducing their impact on the environment. Can't think of any The Warehouse Bunnings - phasing out plastic bags. warehouse but there shops are cold Ecostore The Bodyshop has always had a green philosophy Some stupid retailers are now charging for plastic bags. It should soon dawn on them that in doing so they will force their customers to buy only what they can carry and they will subsequently spend less. Plastic bags are not the problem. The problem is that we have a rubbish collection system when what we also need is a comprehensive rubbish disposal system. Trade Aid - organic products Supre, Glassons, Sussan - companies using non plastic bags Bunnings, no plastic bags The Warehouse, Has bins for customers and staff to separate rubbish items for recycling. Has a place for customers to put unwanted plastic bags for recycling. Recycles cardboard. body shop, history of source of product countdown, "do you really need a bag" The body Shop Bunnings Warehouse - project to get rid of plastic bags ECO-STORE</p>
---	---	---	---

<p>convinced me it is - Shell also have a special petrol as well I think BP BP BP, Shell etc, seem to be trying to produce cleaner fuels, recycling water from car washes, etc. BP BP springs to mind more so than others, but not sure why BP Mobil: Recycling / incinerating waste oil. BP BP Beyond Petroleum, - R@D into alternative fuels (some) - at least accepting that there is little fuel left available Shell, they've put their prices up so much that the average consumer is driving less or more fuel efficiently No. BP - Solar power at some gas stations. Charging so f@\$*ing much for gas you don't want to drive anymore! The dudes turning used chippie oil into bio-diesel - give them a medal and get the govt to give them lots of money! a hard one. I don't believe any fuel company if it says it is clean and green. after all it all it is driven by prices and consumer</p>	<p>Solid Energy TrustPower Ltd making use of wind turbines generally bad, although they like to say otherwise as above Can't remember the name of the company but they have a great tvc showing where our energy comes from indicating rivers and windmills - Meridian meridian energy Meridian Meridian - all electricity generation is from renewable resources Vector Meridian Meridian Genesis: Harnessing wind energy one power company, I think it's meridian, are making all new power generation from renewable sources. Genesis energy Meridian Energy in installing wind power generation. Can't think of one that doesn't include just greenwashing... Meridian generating with Wind farms when they are allowed to be local residents No. Meridian - Earth Air Water campaign - non-fossil fuel generation making bio diesel Meridian and Trustpower seem to be taking initiatives in the South Island. I am all for wind farms</p>	<p>Can't think of one None Toyota Prius et all... Ha! Toyota - Previa Hybrid cars are becoming more popular although prices of these cars are still not market related and over the life of type, not realistic (compared to similar fuel vehicles None Toyota It doesn't matter how flash and Modern a car is today, they are STILL only getting as little as 32 Miles per Gallon, JUST as they did in the 1930's and earlier. The fuel is no different. They make these and those claims about having less of this and less of that and that emissions would be a lot cleaner, etc., BUT, the MPG is STILL the same. WHAT we really need are BETTER Engines! NEW Technology!! There is PLENTY out there! WHAT we need issomeone with the GUTS to back some of these people who HAVE come up with better solutions to our Engine Problems. For instance, there is a company in the US called Angel Labs (http://www.angellabsllc.com) who are developing the Massive Yet Tiny or MYT Engine. It is a VERY POWERFUL and yet SIMPLE Engine with very few moving parts that gives out 150 Miles Per Gallon in an 18 Wheel Semi-Trailer. Put into a car, the smaller versions will offer about 200+ Miles per Gallon. There are others in the Supressed Technolgy Department who also have plenty to offer, but, again, SOMEONE MUST have the Guts to support and BACK them and make our country lead the world in Transport Technolgy. By the way, the MYT Engine can be used in anything from Model Planes and Boats to Container Ships. A Cotton Reel size MYT Engine can power a Push Bike! Hybrids Mercedes - recyclable cars Company that produces hybrids Toyota The AA economy test Hyundai the production of the hybrid</p>	<p>Commonsense Organics warehouse working part time at liquorking, it distresses me what a poor, poor effort is made by Lion to encourage recycling in ANY respect- our wastes are glass, paper and cardboard and we recycle a small portion of our cardboard. Some retailers offer non plastic carry bags but I can't think of any off hand. Bunnings - no plastic bags The Warehouse obviously makes an effort to reduce power consumption by natural light utilisation and also encourages recycling FISHER & PAYKEL, nATIONAL BANK nope The Warehouse - monitoring and controlling waste and power use. Also encouraging suppliers. Possibly Bunnings/Benchmark-doing away with plastic bags Many companies that are now encouraging recycling of packaging. The Warehouse and others. no The Warehouse Body Shop Bunnings Foodtown - reducing plastic bags Foodtown bunnings warehouse - getting rid of plastic bags pak n save regarding their basic approach to supermarket shopping - pay if want bags etc. Would be a financial decision as well Warehouse with their recycleable bags. Bunnings charging for the use of plastic bags Bin Inn with their bring your own container option. Taste Nature (organic food shop in Dunedin). Genuine. Sustainably grown produce, fair trade</p>

intake. BP - car wash processes Ha! Shell, BP BP Shell - meant to have better petrol B.P BP BP claims that their fuel is more "air friendlier" BP BP Biofuel technology. But of course, driven by them (the oil co's). You don't see any investment in say, water engine cars. Wonder why? Bollocks they are! Green, clean images belie the destructive effect of their presence in developing countries, their use of pmc's to enforce compliance in those countries, and their rape of consumers with their ever increasing prices. I would love it if all fuel consumers globally were to as one unit, to stop using fuel for just one day, as a sanction and indication of disgust. BP says it reuses water from its carwashes, which I believe. On a larger scale I don't think the company truly minimizes its impact on the environment Their has to be an interest here, but its not for a	in remote areas. I think meridian use wind farms... Vector, Meridian, NZOG meridian energy Use of wind and water as power generators - can't remember specific company. I believe is genuine Meridian - hydropower and wind power initiatives B.P Energy Meridian Energy Contact energy Meridian have those solar power farms (not too sure of the correct name of them) Genesis, Vector Wind farms. Not enough of them, but a start. Some, but for example the issue of choosing not to use coal powered generators (meridian?) can (despite contrary efficiency claims) be attributed more to public outcry and environmental activism. Meridian - wind farms Genesis - energy from wind and water Meridian Energy says it's carbon-neutral, which I believe is true Meridian with wind farms I do believe there have been efforts made (however the profit margins are first and foremost for these companies). I would say the general public are stalling any progress as well - wind farms are a fantastic idea, but so many so called "greenies" care more about	cars makers of bio fuel/electric cars Toyota Any company that produces electric or alternative fuel cars Touota - Electric Cars Honda - fuel efficient hybrid cars Toyota - hybrids Honda Toyota - Hybrid vehicles Hyundai ford kero Toyota Prius (Hybrid Technology) Im not sure if I have the motor vehicle right Main Freight electric rail NO I DON'T THINK THEY ARE FOR REAL.THEY CHARGE SUCH A HIGH PRICE,YET DON'T GIVE VALUE FOR MONEY,OR REALLY GET BEHIND CHEAPER MORE GREEN FORMS FOR TRANSPORT,AND OST OF CARS ETC. Christchurch City Council for their low emission, bio diesel and electric buses Peugeot Hyundai. Introducing hybrid cars, but also lower emmision diesel engines. The closest to acceptance is the electrical/petrol system. So we are slowly getting there. Toyota Toyota dont know Toyota, Honda, etc hybrid cars there is no doubt that cars are using less fuel for given power, but again, the roading, bridges, tyre noise, emissions, rubber, brakes, disposal, all issues that have to be addressed. Many car manufacturers are bringing out energy efficient and/or combination fossil/bio low emission fuel vehicles. Haundai, Audi, and Lexus to name a few. i have seen those pirus cars not sure in the brand. Hybrid toyota cars peugeot and hyundai have CRDi engines that are very efficient and better for environment than even hybrids. Peugeot Cars running on fuel and diesel are DIRTY None There are more car	products. Countdown / Woolworths = reducing plastic bags, trying to pack more into one bag, promoting using reusable bags. The Warehouse - reducing power / turning lights off, highest recycling rates in NZ = zero waste. Perhaps Harvest and organic companies body shop Ewan Campbell and his meat outlet in Tauranga, Cambrian Meats. His beef is reared using a fertiliser system called Probitas which uses no superphosphates. resturants can't get enough of it. The Eco Store I really like that their products are environmentally friendly. no profit margins, tax bills and greed... what more is there to say Eco store Pass Supermarkets are beginning to encourage people to use less plastic bags but not as proactively as in San Fran! HP computers recycling computers Body Shop Big stores like The Warehouse and Mitre 10 Mega often have very sophisticated systems to control their lighting and heating, etc. in their stores The Warehouse, recyclable packaging and returning funds to the community for energy savings fisher and paykel..efficient appliances body shop - champion of recycling for a long time Organic vegetable farming Can't think of a particular company - sorry! none Bunnings ? charging for its plastic bags None garden centres.

"clean green environment". It's all about resources in the future. BP - long time solar researcher Don` t know BP BP Research has been on-going into cleaner fuels. None BP no better at making profits rather than a cleaner enviroment none bp BP Haha what a joke!	looking at the environment than saving it. Meridian - renewables Don` t know Genesis Meridan Thermaglaze The companies building wind-farms - Meridian is one of these Meridium Energy Gensis Meridian Meridian - wind farms. But others clearly in this field producing exciting plans for new ways to harness natural resources. Mighty River Power None	manufacturers producing hybrid cars, so this is genuine toyota and some others that have the hybrid cars Public transport Toyota toyota The Clean Green Car Company - selling Hybrid cars Toyota - makes a lot of hybrid cars Any car manufacturer who is developing an hybrid car. NO yes i believe Toyota have got the ball rolling introducing their new Lpg/petrol car, which will certainly reduce emissions & save on fuel!! Introducing alternative fuels There are several companies that have worked on the fuel economic diesel engine (Fiat, Citroen come to mind) and of course the hybrids and I've heard that Honda has a tree planting programme for every car produced Toyota and Honda Toyota Hybrid cars	Some supermarkets are giving customers the option to purchase at a modest cost reusable shopping bags and Bunnings have announced that they are phasing out "free" plastic bags Eco store Body shop Supermarkets The Body Shop no animal testing. Warehouse icebreaker,untouched world,commonsense organics The Warehouse packaging from recycled materials, reduced artificial lighting Supermarkets are trying to reduce their use of plastic bags by encouraging reusable cloth type bags The Warehouse - they intentionally keep heating and lighting levels low to save power, they plant New Zealand native plants around all of their stores (when possible), they use only recycled plastic bags at the checkouts Here in New Zealand even many organic shops are throwing around plastic bags ... Maybe Commonsense Organics in Wellington. Good on Bunnings for starting to charge for them. I know there are businesses that are members of the sustainable business round table, but don't know what they actually do. Body Shop North Western Toyota Pack'n save The Body Shop NA using non plastic bags - supermarkets none Untouched World, who uses organic denim and natural products Major supermarkets, ie new world, woolworths and their campaign to decrease plastic bags Commonsense organics HP, environmentally
Anyone selling of manufacturing bio-diesel bp NONE!! Where's our hydrogen engines?! GW has them under lock and key! no BP, does spend some research dollars on alternative energy systems BP BP BP is investing in other power BP bp BP they recycle their carwash water BP b.p BP at least provides sulphur free diesel Can't think of one..... BP has retro ads emphasizing clean white spaces and green colours, and Ethanol biofuels - very well and good, but its merely delaying the	Genisis Energy - investing in alternative forms of energy Power generators association? no Meridian - aren't they doing wind generation? Mercury Power,Meridian and other Power companies that are investigating wind, sea turbines etc power generation contact Meridian Genesis dito Those power companies manufacturing power with wind farms Mercury Energy contact energy I'm in Denmark. They have wind turbines EVERYWHERE. It's awesome!. Vestas is leading the way! there are some but can't supply names Meridan Meridian, Big river and Vector who	Motorists are slowly loosing the right to use the roads. We must become politically organised in order to defeat those who are trying to destroy individual freedom. They are collectivists and have taken over where the communists left off. Hybrid cars Hybrid non gas gusseleres - any brand working on this Toyota Toyota Toyota toyota - more hybrid cars becoming available toyota Toyota, Prius, although a false hood abit due to the manufacturing and disposal of batteries. Some cars are made with things that make them more enviromentally friendly. They are trying to find alteratives for fuel other tan oil. Those that are attempting to mainstream hybrid technologies. Toll Rail - using electric locos on the North Island Main Trunk Toyota toyota car honda, plants trees when you buy a car, plus have a hybrid car	

<p>inevitable peak oil crunch. In fact, a recent US TV article pointed out corn fit for human consumption is being phased out by corn for petroleum suppliment. It is a farce - globally, the fuel industry is more concerned about profit than even our own survival. Emissions are only set to increase, biofuel or not. This will impact on the environment, with a greater load of exhaust to try to absorb. This industry is far from green. It is only oil black, and Gold yellow. you are kidding!! BP BP, Caltex Caltex claims that its fuel cleans your engine, thus reducing emitions. BP claims that 98 is better cause it's cleaner burning trying to get better fuel BP WHAT? Sorry, 'clean/green' and 'fuel' do not equate to me! Mobil - reusing car wash water. BP bp no; although BP state this BP Pellet fire manufacturers BP BP BP with its cleaner diesel. Shell and Chevron (Caltex) are spending a</p>	<p>are all investing in alternative power sources eg wind farms Meridian Energy solid energy Contact the company that provices double glazing Can't think of one..... It is admirable that some NZ energy companies seek Hydro and wind alternatives to coal and petrol burning. Overseas, like India, methane burning from mass compost heaps provides electricity from an otherwise unused source. These sources are cleaner as opposed to petrol and coal burning. However, one small note - Oil is required to lubricate windmills, and some hydro electric equipment. Not only this, the point of manufacture of equipment (ie steel turbines) requires usage of energy, typically 'dirtier' forms of electricity found closer to manufacturing cities. The land around Manapouri, as an example, was flooded, and alot of the natural setting was lost to make way for this large scale electricity project. On the other end of the scale, Contact Energy should be boycotted for its use of coal burning. Theyre rightfully getting embarassed by NZ</p>	<p>General Motors and Ford The Clean Green Car Company Envirocar Toyota - Prius Toyota does having a v8 engine that switches off 4 cylinders when 'not needed' sound bloody stupid or is it just me!? public transport should be subsidised and utilised more. Nothing much being done here. No one leading the way except Mercedes and Toyota in alternative fuels. toyota, nissan Toyota Prius There is one hybrid car on market - I believe much more could be done in this field can't remember name of co. toyota prius says its greener but is it really Toyota - Hybrid technology Nissan - with their hybrids Toyota I cant think of a specific company but i know that many of todays new cars are made to be more fuel efficient, some use alternative fuel methods. Yes they do make an effort from what I can see hybrid cars electic cars Hyundai Introduction of hybrid cars and the investing in developing of Bio-fuels. introducing the 'smart cars' not sure which company tho mabey Toyota again none really. Toyota is doing the Prius, but all of them could do a lot more. Honda says it is, but all it does is plant a few trees Toyota Toyota Clean Green Car Company - hybrid cars Toyota Honda - and others - hybrid cars Growth of public transport systems to reduce car pollution, eg Bay Hopper bio-fuel car makers You've got to be joking! Electric Cars NO Clean green car company seems to be doing it right toyota Toyota with their hybrid cars.</p>	<p>friendly by having facilities available for disposal of HP products. the Bodyshop, Trade Aid Few signs are evident Ceres, Phoenix - nearly all organic retailers have clear policies about waste minimisation, low energy systems etc warehouse eco wares nz The Warehouse as above Foodstuffs - NW and PnS supermarkets - cutting down on plastic bag use Body Shop Farmers markets - local produce, zero packaging a few individuals if it does not cost too much minimal eg supermarkets-plastic bags should be charged for, economically packaged/produced products should be foregrounded Don't know if this counts but my friend uses cutout timers at his Bakery to switch on&off all the front Fridges(except the one that holds the milk)&has any&all electrical appliances off when there is no use for them. Also, I have seen most of Mall retail stores insure there lights and so on are off when closed. wastebusters in ashburton is recycling most of ashburtons refuse.. lot of moeny looking at alternative fuels BP solar power on some gas staions and recycling water in car washes but still sell petrol and diesel! Its a DIRTY job but someones got to do it caltex are you joking? BP reuses its dirty water in a car wash. BP - establishment of solar powered petrol stations. However, they should covert all petrol stations to solar power. BP BP BP BP, they had adds on tv a while back about recycling the detergent from the car wash machines. However this seemed like a big marketing ploy as they were advertising it out there. BP is using solar panels on several of its forecourts. SHELL', "green" adverts I have noticed in "TIME" magazine. None, they are using a unsustainable resource BP - using solar power, Highly unlikely any of them care in the slightest None shell BP - Solar and water - I mostly believe it Shell... Joke or	green groups for its unnecessary use of fossil fuels. So inherantly, the energy industry is not so green. But Hydro and wind alternatives are promising. I like the one that advertises the wind farms Meridian Hydro-electric power generation trying to get better energy Genesis (is that the name?) They are actively building new wind farms and I think it may be the same company who are planning to harness wave and current energy resources in the oceans around NZ. Mighty River Meridian is trying to make an impact. Not at all! genesis Meridian is less environmentally friendly than others. Renewable energy companies such as NZ Windfarms no; although a gas company state their product is more energy efficient Electricity companies installing wind turbines. Genesis Mercury Meridian Energy's use of hydro and increasingly wind power for energy generation. Meridien - using alternative sources of energy. Contact - encouraging consumers to be more insulated	Prius I think that they are called No, i only think that desiel cars are good for the envirement as electic car have batt that cant be recycled. The electric cars that Toyota make. I suspose the car industry has to start somewhere. no Driven by peoples need for more power, one of the biggest rip offs there is... fueled by vanity and bragging rights. I want a car that runs on water. Toyota Cant think of Company, but no of solar powered cars ect electric cars Indranet Technologies subsidiary companies with car about to come onto market. Toyota, Honda for promoting and subsidising hybrid cars Redbus is ChCh - electric buses Toyota has a hybrid car and there are a few others with a similar concept in place. Peugeot have a very efficient diesel engine in their cars which I think VW also use. Not so far apart from some private individuals Toyota hybrid motor vehicles battery celled cars..electric car Toyota - hybrid vehicles Toyota Honda Daihatsu - I think it is them with the dual battery/fuel car??? Tesla Motors Low-emission buses - ChCh City Council toyota prius Toyota / Honda Hybrid cars Toyota Hybrid car None toyota Toyota I believe are making a real effort with their Prius range of vehicles. Toll Holdings Pass new motors fuel savers Wellington Trolley Buses Volkswagen - all Hybrid vehicles faced a potential problem of trying to dump wasted/ dead battery packs Toyota, Honda Toyota and others are bringing out Hybrid cars Shuttle buses in Christchurch Central City - these run off batteries that are	The Body Shop the warehouse Countdown - promotes recycling plastic bags and maximising packing of them while also pushing reusable bags. Has good selection of organic products - sharp contrast to New world Organic and whole food outlets (e.g. Nature's Organics and PIKO in Chch) and Bin Inn bulk sales. Untouched World Porirua City Council with Trash Palace, WCC with recycling and composit bins None progressive enterprises McDonalds recycling Morre Wilsons getting rid of waste(organic waste) Warehouse - to a small degree - discourages use of plastic bags, provides recycling bins in store the supermarkets promoting the fabric or reusable shopping bags are a good idea Pak'nSave - at least they do not use plastic bags Warehouse seems to be trying. body shop eco store Commonsense Organics Pak 'n Save Eco store; same as body shop but on a local scale. The Warehouse The Warehouse Bunnings - have discontinued the use of plastic bags. Different supermarkets have tried to discontinue use of plastic bags through selling non-plastic bags and containers. The Warehouse - energy efficient stores None Fast Food companies continue to pump superheated airout of their extract systems whilst overloading their consumers bodies with harmful fats and food additives - Tax them out of existence or force them to comply with a max 10% by fat of all products
---	--	---	---

what! BP's solar program is great, but they are going to bleed consumers dry till oil runs out before it will make those technologies freely available. There is a new investigation into vegetable oil as alternative to fuel. Richard Branson from Virgin is a case in point. Mobil Shell BP Shell and BP - better fuels BP - solar energy at stations amongst other initiatives BP BP BP, appear to be making an effort to look for fuel resouorces beyond just petrol BP SERVICE STATIONS BP Petrol - "98" and Unleaded 91 BP - could be more hype than truth though... BP None Gull - Reduced sulpher content in their fuels, Shell additives to fuels which makes them more efficient BP - special fuel BP bp BP have solar powered stations around the country n/a BP bp NO I DON'T THINK THEY ARE FOR REAL.THEY CHARGE SUCH A HIGH PRICE,YET DON'T GIVE	Genesis. SOLar and wind power generation Mighty River Power ? Meridian the windmills in the electrical industry - but at the cost of visual pollution Meridian energy - more investment in renewable energy power companys building wind farms NZ Wind Farms example Tararua Wind Farm Meridian Genesis meridian Meridan Meriden Meridian, i think they are the ones who have the windmills, this is good as it is sustainable Absolutely! TRUSTPOWER only uses renewable energy; and some other power cos are going that way. Energy industry has several NZ Govt owned organisation who should be not for profit and investing in sustainable solar and wind reducing individuals need for power. WindFarms NZ ltd Possibly Meridian None Most of them, and to a point I believe them Contact.... Nah! possible the companies promoting home generation alternatives Genesis - wind farms meridian	supplemented by fuel (or perhaps LPG). This was a City Council Initiative in the nineties. Hybrid cars - Toyota? Unless they're solar powered, cars are not environmentally friendly. Toyota, Smart Manufacturers with a vision to increase fuel economy and those who have already started with dual fuel cars, Hybrid cars. Cuba has public buses for up to 300 passengers per bus Honda - improving exhaust emissions of all their new vehicles. Ditto Toyota the electric cars, not sure of company Honda & Toyota - hydrid cars and more effiecient deisel cars none Smart cars Honda, Toyota etc. hybrid cars, great fuel efficiency None - the very industry is polluting any manufacturer with a hybrid or alt fuels model smart car people Honda - hybrid fuel cars Little effort is evident. Clean Green Car Company - stocking hybrids and promoting alternative cars toyoata eco tours wellington Toyota no because they have no real alternatives, we all use what is available to us Prius hybrid cars Toyota Honda Toyota - hybrid vehicles most companies are looking long tearm minimal-eco cars not foregrounded over any other types I can think of 2. Wellington City Buses(unsure of actual Co. name)&Toyota(&other Car producers), that are producing; or like the bus Co, been running Hybrid vehicles. Also Individuals that I've known using food waste oil to run there farm trucks. Can't recall the name of the transport firm but they are now using fuel that is processed from cooking oil. It was on T.V.	and severely restrict advertising Bunnings - doing away with plastic bags The Warehouse The Warehouse have a few good policies but the product miles of their imports may cancel out that The Body Shop- natural products as opposed to manufactured.. Warehouse's Zero Waste No yes sometimes Body Shop, "Dolpine Products", Sealord - drift net free products no n/a Body Shop None None that come to mind. All are accepting and selling goods that are over -packaged. Countdown and Woolworths are fasing out plastic bags -I think. Sunday markets, from farm to table Body shop Ecostore sell wonderful everyday products that are NZ made and better for both us and the environment. glasssons, new world (offering reusable bags) Countdown shopping the body shop The Warehouse - Tindell foundation etc. Cutting down on plastic bags. They use too much paper to advertise when we could use digital means. Body Shop Resene bunnings - reducing plastic bags- a bit of stunt honestly. Foodtown - their "pack 7" posters are a joke. I have never had 7 things packed in a bag there. they need to improve their staff training and not rely on marketing posters, but at least they are aware of the issue. The Natural House Company, The Eco Store NOT Progressive Enterprises

How strongly do you agree with each of the following statements?

n = 1386

	<i>Strongly disagree</i>	1	2	3	4	5	6	7	<i>Strongly agree</i>
Supermarket plastic bags should be banned		5.6% (77)	5.1% (71)	12.1% (167)	14.2% (196)	15.1% (209)	14.6% (202)	33.3% (460)	
The government should legislate to make companies more environmentally responsible		6.1% (84)	5.0% (69)	6.4% (89)	12.6% (174)	19.4% (268)	18.4% (254)	32.2% (445)	
By consumers being more responsible and favouring 'Clean Green' products, companies will get better without legislation		6.0% (83)	10.2% (140)	11.8% (162)	17.2% (237)	20.8% (287)	17.6% (243)	16.3% (225)	
There is an over reaction		40.2%	18.4%	12.8%	9.6%	8.6%	4.1%	6.4%	

to environment issues (556) (254) (177) (132) (119) (56) (88)

How strongly do you agree with these statements?

n = 1875

	Don't agree at all	Agree a little bit	Strongly agree	Not sure
Market forces should lead low-cost housing projects i.e. if the demand is there, property developers will develop low cost houses	28.0% (520)	40.7% (755)	24.5% (455)	6.8% (127)
It is the role of the Government to ensure that an adequate amount of low cost housing is available	9.0% (167)	37.5% (699)	51.3% (957)	2.2% (41)
Low cost housing should be spread through city suburbs rather than concentrated in particular areas	10.4% (193)	22.6% (421)	63.7% (1186)	3.3% (62)
Rather than get directly involved in building low cost houses, the Government should assist people on low incomes to be able to afford their first house	12.8% (238)	35.7% (665)	47.8% (892)	3.8% (70)
Housing affordability is predominantly a problem in the major cities and people who can't afford to buy a house there should move	59.8% (1119)	25.1% (469)	11.5% (216)	3.6% (67)

How much impact do you think each of the following things have had on the strong growth of house prices in New Zealand over the past 10 years?

n = 1857

	Not much impact	Some impact	A major impact
The Resource Management Act and local zoning restricting land supply	16.1% (297)	55.7% (1025)	28.2% (519)
Costs of compliance and local council permits and levies	12.9% (238)	45.7% (844)	41.4% (764)
Costs of materials	10.6% (195)	43.5% (803)	45.9% (846)
Labour costs	10.2% (189)	45.1% (834)	44.7% (827)
Mortgage rates	8.1% (150)	40.7% (753)	51.2% (947)
Easier access to debt/mortgages	5.5% (102)	38.1% (705)	56.4% (1043)
Increased demand for residential investment properties	2.9% (53)	31.2% (575)	65.9% (1214)
